Global X Internet of Things UCITS ETF

THEMATICS

SNSR LN

IE00BLCHJT74

The ETF seeks to invest in companies that stand to potentially benefit from the broader adoption of connected devices, which are enabled by technologies such as sensors, semiconductors, and telecommunications infrastructure.

For Professional Investors only.

There are more people, devices and applications connected to the cloud than ever before.
The rise of connected devices could be largely attributed to falling sensor costs over the past two decades.

The projected decrease in semiconductor costs and the increasing adoption of new technological devices in our daily lives could have the potential to accelerate the development of innovative technological possibilities and facilitate wider adoption of existing technologies.

Concurrently, the emergence of 5G networks and other technological advancements is poised to expand the realm of connected devices even further.

DID YOU KNOW?

- Companies are driving the development of next-generation communication networks through the use of applications such as semiconductors, sensors, and software.
- Forecasts suggest the global IoT market could grow at a compound annual rate of 26% per year through 2029.[1]
- Sensor costs declined by 70% between 2004 and 2018, which facilitated the growth of connected devices.[2]
- The continued demand for wearble devices, like smart watches, is expected to drive market growth over the next five years.[3]
- As consumer behaviours shift, the adoption of connected devices continues to rise. Increased adoption could potentially generate $12.6T (USD) in global economic value by 2030, a nearly eightfold increase from 2020.[4]

GROWTH OF CONNECTED DEVICES DRIVEN BY RAPIDLY FALLING IOT SENSOR COSTS

FUND DETAILS

Inception Date	16 November 2021
Total Expense Ratio	0.60%
Ongoing Charges	0.60%
Primary ISIN	IE00BLCHJT74
Primary Ticker	SNSR LN
SFDR Classification	Article 6
Underlying Index	Indxx Global Internet of Things Thematic v2 Index

FUND INVESTMENT APPROACH

- The Global X Internet of Things UCITS ETF (SNSR LN) offers access to a basket of pure-play companies that are expected to benefit from the increased adoption of connected devices, as enabled by technologies such as WiFi, 5G telecommunications infrastructure, fibre optics, advanced sensors, and next-generation semiconductors.
- The initial universe of stocks includes companies that derive greater than 50% of their revenues from IoT technologies and services.
- Index components are subject to maximum weight of 6% and minimum weight of 0.3%.
- Components are rebalanced annually.

Prospectuses and Key Investor Information Documents (KIIDs) for this ETF are available in English at www.globalxetfs.eu/funds/snsr/
