

Global X Genomics & Biotechnology UCITS ETF (GNOM)

FUND OBJECTIVE

The Global X Genomics & Biotechnology UCITS ETF (GNOM) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive Genomics V2 Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by the index provider when publishing index constituents and is not comprehensive.

As of 2 Nov 2021

Index Provider: SOLACTIVE AG

KEY FEATURES

High Growth Potential

Targeted Exposure

ETF Efficiency

SOLACTIVE GENOMICS V2 INDEX

SELECTION

- The index is designed to track the performance of companies that have or are expected to have significant exposure to the field of Genomics by using a natural language processing (NLP) algorithm that evaluates publicly available information such as financial websites, search engines, and company publications.
- Companies are first ranked according to the reference frequency of the index theme specific keywords ("Index Score").
- Companies are then screened based on revenue exposure to one of the following Genomics related business operations:
 - Gene editing
 - Genomic sequencing
 - Development and testing of genetic medicine/therapies
 - Computational genomics and genetic diagnostics
- Companies that derive at least 50% of revenue from the above Genomics related business operations above are eligible for the index. Companies that are not confirmed based on the 50% of revenue screen but that are classified as "Biotechnology" by FactSet are further reviewed and analyzed based on Research and Development (R&D) expenditures, product pipeline, and operating business segments. Only those Biotechnology companies with exposure to the Genomics related business activities are eligible for the index.
- The remaining eligible companies are ranked by their Index Scores, and the 50 highest ranking companies constitute the final index.

SELECTION POOL

- Primary listing is in one of the Developed Countries, as defined by the Solactive Country Classification, or
- American Depositary Receipts (ADRs) that have primary listing in Emerging Countries.
- Market capitalization of at least USD 200 million for new index constituents (existing constituents will remain in the index unless market capitalization falls below USD 160 million)
- Free float percentage of total shares outstanding of at least 10% or a minimum free float market capitalization of USD 1 billion
- Average daily trading volume in the last six months of at least USD 2,000,000 for new index constituents (existing constituents will remain in the index unless average daily trading volume falls below USD 1,400,000)
- Classified under the Economy "Healthcare" in the FactSet Industries and Economic Sectors Classification.

WEIGHTING SCHEME

- Index components are weighted according to Free Float Market Capitalization with the following constraints applied at each semi-annual rebalance:
 - Each component is subject to maximum weight of 4% and minimum weight of 0.3%.
 - Any component with a market capitalization larger than \$50 billion USD is capped at 2%; for constituents that have been included in the index with the capping applied, the capping remains effective unless the company's market capitalization drops below \$40 billion USD.

REBALANCES/REVIEWS

- The index follows a semi-annual reconstitution schedule. Adjustments are made on the second Friday in May and November.
- An existing index constituent is only excluded if it does not have a positive Index Score or it generates less than 50% of its revenues from Genomics related business operations and/or is no longer classified as “Biotechnology”.
- A new company is added only if it passes all selection criteria and ranks in the top 10 in the Index Score ranking.

Disclosures

The Global X UCITS ETFs are regulated by the Central Bank of Ireland.

This is a marketing communication.

Please refer to the relevant prospectus, supplement, and the Key Information Document (“KID”) of the relevant UCITS ETFs before making any final investment decisions.

Investors should also refer to the section entitled “Risk Factors” in the relevant prospectus of the UCITS ETFs in advance of any investment decision for information on the risks associated with an investment in the UCITS ETFs, and for details on portfolio transparency. The relevant prospectus and KID for the UCITS ETFs are available in English at www.globalxetfs.eu/funds.

Investment in the UCITS ETFs concern the purchase of shares in the UCITS ETFs and not in a given underlying asset such as a building or shares of a company, as these are only the underlying assets that may be owned by the UCITS ETFs.

A UCITS ETF's shares purchased on the secondary market cannot usually be sold directly back to a UCITS ETF. Investors must buy and sell shares on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying shares and may receive less than the current net asset value when selling them. Changes in exchange rates may have an adverse effect on the value price or income of the UCITS ETF.

Past performance of a UCITS ETF does not predict future returns. Future performance is subject to taxation which depends on the personal situation of each investor, and which may change in the future. Neither past experience nor the current situation are necessarily accurate guides to the future growth in value or rate of return of a UCITS ETF.

Investment may be subject to sudden and large falls in value, and, if it is the case, the investor could lose the total value of the initial investment. Income may fluctuate in accordance with market conditions and taxation arrangements. The difference at any one time between the sale and repurchase price of a share in the UCITS ETF means that the investment should be viewed as medium term to long term.

Any investment in a UCITS ETF may lead to a financial loss. The value of an investment can reduce as well as increase and, therefore, the return on the investment will be variable.

Global X ETFs ICAV is an open-ended Irish collective asset management vehicle issuing under the terms of its prospectus and relevant supplements as approved by the Central Bank of Ireland and is the issuer of certain of the ETFs where stated.

Global X ETFs ICAV II is an open-ended Irish collective asset management vehicle issuing under the terms of its prospectus and relevant supplements as approved by the Central Bank of Ireland and is the issuer of certain of the ETFs where stated.
