Global X Nasdaq 100 Covered Call UCITS ETF

EQUITY
INCOME

A fund that seeks to generate income by replicating a covered call index via premiums received from selling calls. This can allow investors to benefit from both reduced volatility and potential income, with underlying equity exposure designed to match constituents of the Nasdaq-100 Index.

For Professional Investors only.

WHAT IS THE GLOBAL X NASDAQ 100 COVERED CALL UCITS ETF (QYLD LN)?

QYLD LN implements a covered call strategy on the Nasdaq 100 Index (NDX). The ETF maintains exposure to the stocks in the Nasdaq 100 while selling at-the-money call options on the index each month.

WHAT IS A COVERED CALL STRATEGY?

A covered call strategy is an option-based income strategy that involves selling call options against owned stocks to generate income while mitigating downside risk. This strategy can also provide a variety of diversification benefits.¹

WHAT ARE CALL OPTIONS?

Call options contracts give a buyer the right, but not the obligation, to purchase a security at a pre-determined price within a specific time frame. This is known as the strike price. The option seller must sell the security at the strike price if the buyer chooses to exercise the option.²

DID YOU KNOW?

QYLD LN can serve as a versatile premium income solution. Benefits of a covered call strategy may include attractive yields, diversification, risk mitigation, and regular income distributions*.

- **Comparatively High Yield:** The covered call strategy has recently maintained a relatively higher yield. With a 12-month yield of 12.2%, QYLD LN outperforms global high-yield bonds (9.5%) and emerging market bonds (8%), as well as traditional asset classes such as 10-Year U.S. Treasuries (4.6%) and U.S. Equities (1.6%).³
- **Diversification & Income:** QYLD LN offers the potential for equity sector diversification within an income portfolio. Investors who focus on high dividend yield strategies often have limited exposure to growth- sectors like information technology, healthcare, and consumer discretionary. QYLD LN allows investors to capitalise on implied volatility, mitigate risk in these growth-style sectors, and potentially enhance equity portfolio diversification.
- **Outperformance During Downtrends:** Covered call ETFs have historically outperformed compared to their respective equity indices during both steep and gradual market declines. This is due to the covered call premiums providing a level of downside risk mitigation.
- **Monthly Distributions:** QYLD LN aims to provide monthly distributions (for the distribution share class only).

Note: *For distributing share classes only

Capital at Risk. All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed.

FUND DETAILS

Total Expense Ratio	0.45%
Ongoing Charges	0.45%
Swap Fee	0.00%
Primary ISIN	IE00BM8R0J59
Primary Ticker	QYLD LN
SFDR Classification	Article 6
Underlying Index	Cboe NASDAQ-100 BuyWrite V2 UCITS Index

FUND INVESTMENT APPROACH

- The Global X Nasdaq 100 Covered Call UCITS ETF (QYLD LN) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Cboe NASDAQ-100 BuyWrite V2 UCITS Index (BXNTU).
- The fund maintains equal notional exposure to the long NASDAQ-100 Index component and the short call option component. This means that the short call option position is “covered” by the long NASDAQ-100 Index component.
- The composition of the NASDAQ-100 Index component is reviewed in March, June, and September, following the schedule set by the Index.
- The BXNTU Index specifies that each NASDAQ-100 Index call option in the hypothetical portfolio must be held until maturity, which generally occurs on the third Friday of each month.

COVERED CALL STRATEGY PROCESS EXPLAINED

Disclosures

The Global X UCITS ETFs are regulated by the Central Bank of Ireland.

This is a marketing communication. Please refer to the relevant prospectus, supplement, and the Key Information Document (“KID”) of the relevant UCITS ETFs before making any final investment decisions. Investors should also refer to the section entitled “Risk Factors” in the relevant prospectus of the UCITS ETFs in advance of any investment decision for information on the risks associated with an investment in the UCITS ETFs, and for details on portfolio transparency. The relevant prospectus and KID for the UCITS ETFs are available in English at www.globalxetfs.eu/funds.

Investment in the UCITS ETFs concern the purchase of shares in the UCITS ETFs and not in a given underlying asset such as a building or shares of a company, as these are only the underlying assets that may be owned by the UCITS ETFs.

A UCITS ETF's shares purchased on the secondary market cannot usually be sold directly back to a UCITS ETF. Investors must buy and sell shares on a secondary market with the assistance of an intermediary (e.g. a stockbroker) and may incur fees for doing so. In addition, investors may pay more than the current net asset value when buying shares and may receive less than the current net asset value when selling them. Changes in exchange rates may have an adverse effect on the value price or income of the UCITS ETF. Past performance of a UCITS ETF does not predict future returns. Future performance is subject to taxation which depends on the personal situation of each investor, and which may change in the future. Neither past experience nor the current situation are necessarily accurate guides to the future growth in value or rate of return of a UCITS ETF. Investment may be subject to sudden and large falls in value, and, if it is the case, the investor could lose the total value of the initial investment. Income may fluctuate in accordance with market conditions and taxation arrangements. The difference at any one time between the sale and repurchase price of a share in the UCITS ETF means that the investment should be viewed as medium term to long term.

Any investment in a UCITS ETF may lead to a financial loss. The value of an investment can reduce as well as increase and, therefore, the return on the investment will be variable. Global X ETFs ICAV is an open-ended Irish collective asset management vehicle issuing under the terms of its prospectus and relevant supplements as approved by the Central Bank of Ireland and is the issuer of certain of the ETFs where stated.

Global X ETFs ICAV II is an open-ended Irish collective asset management vehicle issuing under the terms of its prospectus and relevant supplements as approved by the Central Bank of Ireland and is the issuer of certain of the ETFs where stated.

Communications issued in the European Union relating to Global X UCITS ETFs are issued by Global X Management Company (Europe) Limited (“GXM Europe”) acting in its capacity as management company of Global X ETFs ICAV. GXM Europe is authorised and regulated by the Central Bank of Ireland. GXM Europe is registered in Ireland with registration number 711633.

Communications issued in the United Kingdom and Switzerland relating to Global X UCITS ETFs are issued by Global X Management Company (UK) Limited (“GXM UK”), which is authorised and regulated by the Financial Conduct Authority. The registered office of GXM UK is 77 Coleman St, London EC2R 5BJ. Information about GXM UK can be found on the Financial Services Register (register number 965081).

Information for Investors in the United Kingdom

Please refer to the relevant prospectus, supplement, and the Key Investor Information Document (“KIID”) of the relevant UCITS ETFs before making any final investment decisions. These are available in English at www.globalxetfs.eu. The Financial Ombudsman Service is unlikely to consider complaints relating to the ETF and any claims for losses relating to the manager and the Depositary of the ETF are unlikely to be covered under the Financial Services Compensation Scheme.
