Through improved harvesting techniques and technologies, storage methods, consumer education, and surplus food redistribution initiatives, food waste reduction efforts mitigate environmental impact, alleviate pressure on ecosystems, and contribute to a more sustainable and efficient food system. Robotics/Automation: Robotics and automation technologies streamline agricultural tasks through drones, autonomous vehicles, and artificial intelligence-driven systems, enhancing productivity, reducing labour costs, and optimising resource usage to foster sustainable farming practices with potentially lower environmental impacts. Controlled Environment Agriculture: Controlled environment agriculture involves growing crops indoors or in controlled settings, optimising conditions to enable year-round production, conserving resources, and offering opportunities for urban farming, thus promoting food security and reducing pressure on natural ecosystems. Agricultural Biotechnology: Biotechnology in agriculture utilises genetic engineering to improve crop traits, enhance yields, and bolster resistance to pests and diseases, potentially reducing the reliance on chemical inputs while addressing food security concerns. The Fund will seek to replicate the performance of the Index.</p>
